LATEST PROJECTS:

Custom PC Builder Web Application (Inspired by PCPartPicker)

URL: <https://chris.sparktech.agency/>

- Developed a full-featured PC building platform allowing users to select, compare, and save custom PC configurations.
- Integrated Amazon Product Advertising API (PA-API 5.0) to dynamically fetch real-time product data such as titles, prices, ratings, images, and specifications.
- Implemented intelligent compatibility filtering (e.g., CPU-Motherboard socket matching) using JavaScript and localStorage.
- Created custom WordPress plugins and shortcodes for modular integration of component tables with filters, sorting, and pagination.
- Built a user-friendly interface using PHP, JavaScript, AJAX, HTML, and CSS, ensuring responsive design and performance optimization.

Technologies & Tools: PHP, JavaScript, jQuery, HTML5, CSS3, WordPress (Core & Plugin Development), Amazon Product Advertising API 5.0

Custom Storage Booking Web Application (Inspired by lovespace.co.uk)

URL: <https://leonardoemlh.sparktech.agency/multi-check>

- Developed a comprehensive web application enabling users to customize storage plans by selecting various items,

scheduling pickups, and managing deliveries.

- Implemented dynamic item selection with real-time pricing calculations based on item dimensions and quantities.
- Integrated scheduling functionalities, allowing users to choose supply and pickup dates with flexible or fixed time windows.
- Added features for additional services, including packing materials, disposal options, and protection plans.
- Ensured secure payment processing and data handling through SSL encryption and secure form submissions.

Technologies used: PHP, JavaScript, jQuery, HTML, CSS, WordPress (Core & Plugin Development)

Online Donation System – Femmy O Foundation

URL: <https://femmyofoundation.com/donation>

- Developed a secure and user-friendly online donation system for the Femmy O Foundation using Stripe Subscription API.
- Implemented custom donation logic allowing both one-time and recurring donations, with dynamic handling of:
 - Custom donation amounts for both one-off and monthly recurring contributions.
 - Fixed donation tiers (preset amounts) with selectable one-off or recurring frequency.
- Built intuitive front-end forms to guide users through selecting donation types and frequencies.
- Integrated secure Stripe Checkout and webhooks for real-time payment confirmation and subscription management.
- Ensured donor data privacy and optimized responsiveness across all devices.

Technologies used: PHP, JavaScript, HTML, CSS, WordPress (Core & Plugin Development), Stripe API

Divi Chart Kit – Advanced Data Visualization Plugin for Divi Builder

URL: <https://wphoop.com/plugins/divi-chart-kit>

- Developed a comprehensive WordPress plugin enhancing the Divi Builder with over 18 interactive chart modules, facilitating dynamic data representation.
- Implemented support for multiple data sources, including custom inputs, CSV uploads, direct database queries, and real-time integration with Google Sheets.
- Engineered advanced customization features, allowing users to tailor chart aesthetics, data labels, axes configurations, and interactive toolbars to fit specific requirements.
- Ensured full responsiveness and cross-browser compatibility, delivering consistent user experiences across devices.

Technologies used: PHP, JavaScript, HTML, CSS, WordPress API, Google Sheets API.
