

Online Notary System – Workflow Overview

Objective

To build an **online notary platform** that connects customers with registered notaries digitally, allowing document verification, signing, and affiliate-based referrals.

The platform will include **four dashboards** — Super Admin, Notary, Customer, and Affiliate — each with its own role and functionality.

1. System Structure

User Roles

1. **Super Admin (Owner)**
Oversees the entire platform — manages notaries, customers, affiliates, and payments.
 2. **Notary**
A verified professional who handles customer document requests online.
 3. **Customer**
The individual or business needing documents to be notarized.
 4. **Affiliate**
A partner who promotes the platform using a unique QR code and earns commissions when users sign up through it.
-

2. Workflow Summary

A. Customer Journey

1. Customer visits the website and creates an account.
2. Logs in and fills out legal information or uploads the required documents.
3. Sends a **“Notary Request”** through the system.
4. The request is **broadcasted to all available (online) notaries** — similar to how Uber connects to nearby drivers.
5. When a notary accepts the request, the customer and notary are paired.
6. Once the notary completes the verification process, the customer receives confirmation that their notarization is done.

B. Notary Journey

1. Notary registers on the platform and submits their license and verification details.
2. The Super Admin reviews and approves the notary before activation.
3. When online, the notary can view new incoming customer requests.
4. On accepting a request, the notary can access the customer's legal details and proceed with the notarization.
5. After completing the process, the notary clicks **"Mark Complete"** and pays **\$8 to the platform (Admin)** through an integrated payment system.
6. Payment is automatically logged, and the Admin receives the funds.

C. Super Admin Journey

1. Super Admin logs into the control panel.
2. Can view and manage:
 - All **notaries, customers, and affiliates**
 - **Transactions and payments**
 - **Affiliate codes and QR links**
3. Can **approve or remove** notaries, **generate affiliate codes**, and monitor **customer referrals**.
4. All payments from notaries are tracked and summarized in the dashboard for reporting.

D. Affiliate Journey

1. Affiliate registers and receives a **unique referral link & QR code**.
2. When someone scans their QR and signs up, the system tracks which affiliate referred that user.
3. The affiliate's dashboard shows:
 - Total sign-ups through their QR

- Earnings and commissions
4. The Admin can view and manage all affiliate statistics and referral activity.
-

3. Payment Process

- When a notary completes a task, they pay **\$8** to the platform (Super Admin).
 - The payment is handled through a secure online gateway (e.g., Stripe or PayPal).
 - All transactions are stored for financial tracking and transparency.
-

4. Dashboard Highlights

User Type	Key Functions
-----------	---------------

Super Admin	Manage all users, approve/reject notaries, generate affiliate QR codes, view transactions, and monitor referrals.
Notary	View and accept customer requests, access documents, mark jobs complete, pay Admin fees, and view earnings history.
Customer	Register, upload documents, send notary requests, track request status, and communicate with notary.
Affiliate	Register, access referral QR, track sign-ups, and monitor commissions.

5. Platform Development Phases

Phase Description		Outcome
1	Registration & login system (for all roles)	4 dashboards created
2	Super Admin panel setup	Admin controls and management features
3	Notary-customer request system	Real-time request flow (like Uber)
4	Payment integration	Secure \$8 transfer to Admin
5	Affiliate module	QR code and referral tracking

Phase Description

Outcome

6 Testing & deployment

Fully working live platform

6. Key Benefits for the Client

- A **fully automated digital notary system** reducing manual processes.
- **Uber-style smart matching** between customers and available notaries.
- **Transparent payment flow** for easy financial management.
- **Affiliate marketing channel** to boost growth.
- Scalable and secure architecture ready for future app or video integration.
